gets even easier* ↗

LECHLER

Caring about the differences!

It speeds up the selection of the colour/effect while quickly identifying the most efficient solution for your repair.

It is the new system for selecting and correcting the COLOUR/EFFECT for the Refinish sector based on a vast and constantly expanding database.

The new software interface, completely integrated within the Lechler MAP Color&Product Management platform, allows you to work with two different modes, thus responding to all the different needs of the sector:

EASY Mode

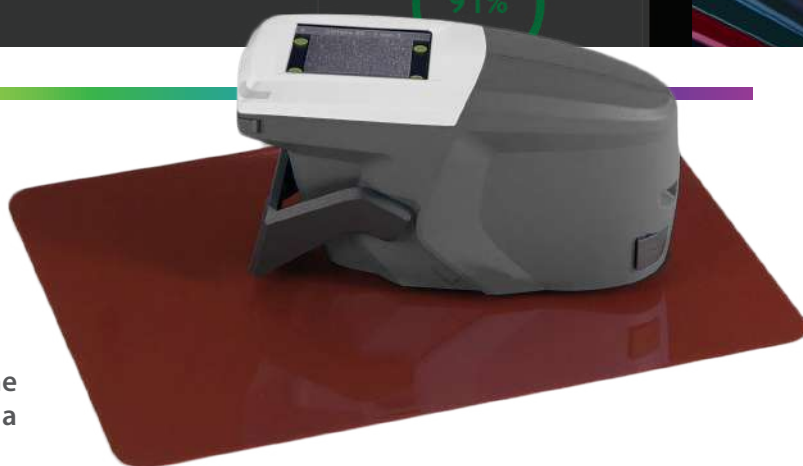

Designed to give the car painter a simple and alternative tool to the Colour Sample Collections

READING ► SEARCH/
AUTOMATIC CORRECTION
► DOSAGE

ADVANCED Mode

Designed to give the Car painter/Distributor a more advanced and performing tool than the Colour Sample Collections

READING ► SEARCH ►
AUTOMATIC CORRECTION
► CORRECTION ON THE
SWATCH CARD ► DOSAGE

CMEffect uses a new multi-angle spectrophotometer, now also equipped with a camera capable of faithfully identifying the type of metallic or pearl particles possibly present in the colour.

The tool is also equipped with:

- **Touch Screen**
(for easy naming and management of the reading)
- **Led indicators**
(for easy positioning of the spectrophotometer)
- **Docking station**
(for easy positioning that allows charging and data transfer)
- **WIFI system**
(for easier transmission of the reading to the PC)

Starting from the release 4.3.1.2, the Lechler MAP SW also contains the **CMEffect** module; it is therefore sufficient to update the SW and then go to the "Configuration / SPECTROPHOTOMETER" panel and select the BYK MICRO TRI EFFECT model in the "CME Model" field.
